- ? Compact 7Ah battery
- ? Matching Compact Design
- ? 15W 8Ω Speaker
- ? Factory wired for quick installation
- ? Protected with resettable fuse
- ? Integral Speaker for improved sound volume and clarity

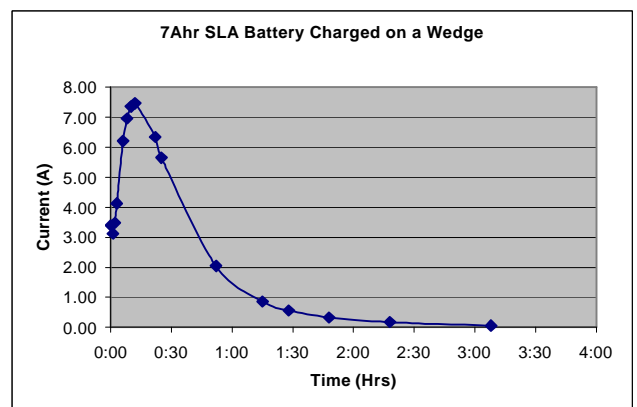

Battery Back Up Box

The AD Series *Battery Back Up System* is a convenient way of providing a fully operational uninterruptible power supply (UPS) for use with a range of radio transceivers. It is designed to fit underneath the highly successful AD Series Mains Power Supplies providing one complete mini stack system and a solid base on to which the radio transceiver can be securely fitted.

The Battery Back up Box (*BB Box*) is ready wired and need only be connected to the power supply to provide a fully operational system. As all three units (BB Box, Power Supply and Transceiver) are all located together, there is no need to extend ugly wires to a battery situated in a remote location.

The BB Box also features an integral speaker for additional volume and sound quality when used within a busy office or workshop environment.

The battery is housed in a rugged corrosion resistant anodized aluminium extrusion that matches with the Desktop Power Supplies.
